PROGRAMMER'S DYNAMIC SPELLCHECKER

ABSTRACT OF THE DISCLOSURE

Methods, apparatus and articles of manufacture for determining the validity of words within a programming environment. In one embodiment, an operation of context-sensitive word validity checking in a programming environment is provided. The method comprises, in response to receiving user input information at an input location in the programming environment, determining a context of the input location; determining a validity of the user input information relative to the context; and outputting a visual indication of any invalid user input information.
